

nami: AI Bot

A Modular, Extensible AI Agent Framework

Building sophisticated AI agents with persistent sessions, filesystem sandbox, and dynamic persona management.

Built on **adk-rust** and **teloxide**.

What is Nami?

- **Multi-Platform AI:** Support for Gemini, Anthropic, or OpenAI-compatible LLMs.
- **Persistent Sessions:** SQLite-backed history.
- **Hybrid MCP Support:** Connect to local and remote Model Context Protocol servers.
- **Sandboxed Environment:** Filesystem tools protected by `.namiignore`.

✨ Core Features

- **Modern TUI:** Rich interactive CLI with ASCII banners and animated indicators.
- **@ File Context:** Reference workspace files directly using `@path/to/file`.
- **Parallel Task Execution:** Orchestrate multiple sub-agents simultaneously.
- **Live Web Search:** Integrated Google Search via Serper.dev.

Architecture

The system supports multiple entry points sharing core agent logic:

- **Telegram Bot:** via teloxide.
- **Interactive CLI:** Rich terminal experience.
- **Direct Run:** Execute single prompts.
- **HTTP Server:** Run as a service.

Core logic powered by adk-rust and LlmAgent.

Obsidian-Style Wiki KM

Transparent Knowledge Management using Markdown files:

- **Graph View:** Knowledge graph nodes and edges.
- **Tagging:** Filter notes by `#tags`.
- **Daily Notes:** Automatic journal entries.
- **Backlinks & Links:** Support for `[[wikilink]]` and link integrity checks.
- **Templates:** Structured page application.

Persona & Memories

- **AGENT.md**: Defines the "Soul" (personality and tone).
- **USER.md**: Defines the master's context and preferences.
- **MEMORIES.md**: Automatically records personal facts learned about the user.
- **Todo Management**: Integrated task tracking (`add_todo` , `list_todos`).

Getting Started

1. **Configure:** Set up `.env` with API keys (Google, Teloxide, etc.).
2. **Customize:** Edit `AGENT.md` and `USER.md`.
3. **Build:** `cargo build --release`.
4. **Run:**
 - `nami init`
 - `nami bot`
 - `nami cli`

Future Vision

- **RAG Integration:** Vector database connection for semantic memory.
- **Multi-modal:** Vision tools to analyze images and screenshots.
- **Voice Mode:** Whisper integration for voice-to-text.
- **Automated Evals:** Accuracy testing suite.
