

nami: AI Bot

A Modular, Extensible AI Agent Framework

Building sophisticated AI agents with persistent sessions, filesystem sandbox, and dynamic persona management.

Built on **adk-rust**, **teloxide**, and **axum**.

What is Nami?

- **Omni-Channel AI:** Support for Telegram, LINE, CLI, and Web UI.
- **Multi-Model Support:** Gemini, Anthropic, or OpenAI-compatible (ThaiLLM).
- **Persistent Memory:** SQLite-backed history and long-term searchable facts.
- **Hybrid MCP Support:** Connect to local and remote Model Context Protocol servers.
- **Sandboxed Environment:** Filesystem tools protected by `.namiignore`.

User Experience

- **Modern TUI:** Rich interactive CLI with ASCII banners and animated indicators.
- **Embedded Web UI:** React-based dashboard via `nami browse`.
- **Slash Commands:** Quick actions like `/new`, `/parallel`, `/goal`, and `/schedule`.
- **@ File Context:** Reference workspace files directly using `@path/to/file`.
- **Silent Cancellation:** Interruption support with `Ctrl+C` or `ESC`.

Agent Intelligence

- **Sub-Agent Specialists:** Dedicated agents for Coding, Research, Writing, and more.
- **Parallel Orchestration:** Execute and monitor multiple complex tasks simultaneously.
- **Autonomous Loops:** "Ralph Wiggum" loop agent for multi-step goal attainment.
- **Agent Reflection:** Background service synthesizes session logs into persistent memories.
- **AI Gateway:** High-availability routing and fallback via MLflow Deployments.

Knowledge & State

- **Obsidian-Style Wiki:** Human-readable Markdown vault with `[[wikilinks]]`.
 - **Graph View:** Knowledge graph nodes and edges.
 - **Tagging & Backlinks:** Advanced note discovery and integrity.
 - **Daily Notes:** Automatic journaling for project tracking.
- **State Protocol:** Structured JSON tracking for long-running task persistence.
- **Todo Manager:** Integrated task tracking (`add_todo` , `list_todos`).

Soul & Skills

- **Dynamic Persona:** Personality and context defined in `AGENT.md` and `USER.md`.
- **Modular Skills:** Extensibility via `workspace/.skills/` (e.g., Blog Manager, System Status).
- **Publishing Suite:** Automate documentation into **PDF** or **EPUB** formats.
- **Native Image Gen:** High-quality visuals via Gemini 2.5 Flash Image.

System & Observability

- **Observability Stack:** Integrated **OpenTelemetry** and **MLflow** for tracing and tracking.
- **Task Scheduler:** Persistent `crontab`-style background system for automated tasks.
- **Performance Optimized:** Tuned release profiles with LTO and symbol stripping.
- **Live Web Search:** Integrated Google Search via Serper.dev.

Getting Started

1. **Configure:** Set up `.env` with API keys (Google, Teloxide, LINE, etc.).
2. **Customize:** Edit `AGENT.md` and `USER.md`.
3. **Build:** `make build` (compiles WebUI assets and Rust binary).
4. **Run:**
 - `nami init`
 - `nami bot` / `nami line`
 - `nami cli` / `nami browse`

Future Vision

- **RAG Integration:** Vector database connection for advanced semantic memory.
- **Voice Mode:** Whisper integration for voice-to-text and speech synthesis.
- **Multi-modal Tools:** Deep vision analysis for images and technical screenshots.
- **Automated Evals:** Continuous accuracy testing and scoring suite.
